

Waste incinerated in Scotland – 2022

Official Statistics

Waste incinerated in Scotland - 2022

This release provides a summary of all waste incinerated in Scotland for calendar year 2022. It excludes Scottish waste incinerated elsewhere. Information on the methodology used to prepare this release and a definition of terms is in the methodology and glossary at the end of this document.

Key points

Waste incinerated in Scotland – 2022 calendar year

- The total quantity of waste incinerated in Scotland in 2022 was 1.42 million tonnes, an increase of 67,000 tonnes (4.9%) from 2021, and an increase of 1.01 million tonnes (246%) from 2011.
- Over one third (36.4%) of waste incinerated was incinerated by recovery. This follows the accreditation of an additional two municipal waste incineration facilities to the R1 efficiency standard in 2022, bringing the total number of accredited facilities in Scotland to three.
- Sorting residues were the largest waste category incinerated in Scotland in 2022 (492,000 tonnes), which was an increase of 42,000 tonnes (9.4%) from 2021 and comprised over one third (34.7%) of all waste incinerated. The other two main categories of waste incinerated were Wood wastes (443,000 tonnes incinerated, 31.2% of all waste incinerated) and Household and similar wastes (358,000 tonnes, 25.2% of all waste incinerated)
- Hazardous waste comprised 0.04% (500 tonnes) of waste incinerated in 2022, a decrease of 1,800 tonnes (77.9%) compared with 2021. Hazardous waste incinerated was predominantly (89.1%, 470 tonnes) Sludges and liquid wastes from waste treatment.
- Summary data tables are also available to download in Excel format on [SEPA's web site](#).

This is an Official Statistics publication. These statistics have been produced to the high professional standards defined in the Code of Practice for Official Statistics, which sets out fourteen principles under the pillars of Trustworthiness, Quality and Value. More information on the Official Statistics Code of Practice can be found here: <https://code.statisticsauthority.gov.uk/the-code/>

Lead statistician: Peter Ferrett

Table 1. Waste incinerated in Scotland – Summary data 2022

WASTE CATEGORY	TOTAL INCINERATED (TONNES)
Acid, alkaline or saline wastes	0
Animal and mixed food waste	17,969
Animal faeces, urine and manure	82,032
Batteries and accumulators wastes	0
Chemical wastes	110
Combustion wastes	0
Common sludges	0
Discarded equipment (excluding discarded vehicles, batteries and accumulators wastes)	0
Discarded vehicles	0
Dredging spoils	0
Glass wastes	0
Health care and biological wastes	3,506
Household and similar wastes	357,972
Industrial effluent sludges	11,271
Metallic wastes, ferrous	0
Metallic wastes, mixed ferrous and non-ferrous	0
Metallic wastes, non-ferrous	0
Mineral waste from construction and demolition	0
Mineral wastes from waste treatment and stabilised wastes	0
Mixed and undifferentiated materials	19
Other mineral wastes	0
Paper and cardboard wastes	0
Plastic wastes	0
Rubber wastes	9,427
Sludges and liquid wastes from waste treatment	2,060
Soils	0
Sorting residues	492,231
Spent solvents	0
Textile wastes	0
Used oils	0
Vegetal wastes	0
Waste containing PCB	0
Wood wastes	442,659
Total	1,419,256

Data and Trends

Waste Incinerated in Scotland

In 2022, 1.42 million tonnes of waste were incinerated in Scotland across 16 permitted incineration facilities. This was an increase of 67,000 tonnes (4.9%) from 2021. This increase is consistent with the longer-term incineration trend, with 1.01 million tonnes (246%) more waste incinerated in Scotland in 2022 than in 2011 (see Figure 1 below).

Sorting residues were the largest waste category incinerated in Scotland in 2022 (492,000 tonnes, 34.7% of all waste incinerated), a 42,000 tonne (9.4%) increase from 2021. The incineration of Sorting residues has been increasing since 2019 (Figure 1). This is indicative of an increase in the number of municipal waste incinerators in Scotland over this time. These facilities incinerate, among other wastes, low value waste stream outputs from the sorting of waste.

In 2022 there were 443,000 tonnes of Wood wastes incinerated, comprising 31.2% of all waste incinerated, an increase of 24,000 tonnes (5.8%) from 2021. About one fifth (19.7%, 87,000 tonnes) of the Wood wastes incinerated in 2022 originated in the UK outwith Scotland (data not shown), a 67,000 tonne reduction from the 154,000 tonnes (36.8%) of these wastes originating in the UK outwith Scotland incinerated in 2021.

There were 520 tonnes of hazardous waste incinerated in Scotland in 2022 (see Table 4 below), which amounted to 0.04% of all waste incinerated in Scotland. Most of the hazardous waste incinerated (89.1%, 470 tonnes) were Sludges and liquid wastes from waste treatment (see Figure 3 below).

In 2022, almost forty percent (39.7%) of the waste incinerated in Scotland was incinerated by co-incineration, with 36.4% incinerated by recovery, and 23.9% incinerated by disposal. This is the first time that incineration by recovery is reported¹, to be higher than incineration by disposal and results from two new accreditations in 2022 to give a total of three Scottish municipal waste incinerators now accredited to the R1 energy efficiency standard².

¹ This is the first time that incineration by recovery is reported to be higher than incineration by disposal, but 2022 is not the first year in which it has occurred. Historical incineration data has been revised to account for the newly accredited R1 facilities, and subsequently from 2019 onwards incineration by recovery is greater than incineration by disposal. Refer to the Revisions section on page 6 for further details.

² All historic data has been amended for the newly accredited R1 incinerators, as the incineration process has not changed during the lifetime of the incinerators.

DATA USES, FEEDBACK, REVISIONS POLICY, METHODOLOGY, GLOSSARY OF TERMS AND MEASURES, AND REFERENCES

User Statement

Data on waste generation and management are collected to support policy development and monitor policy effectiveness, particularly the commitments in [Making Things Last – A Circular Economy Strategy for Scotland](#) and to support policy development. The data contribute to the [UK Statistics on waste](#) and are also used extensively by local and central government, the waste industry, researchers and the general public

Feedback

We welcome feedback on the data from all users including how and why the data are used. This helps us to understand the value of the statistics to external users. Please see our contact details at the bottom of the first page of this notice or e-mail: waste.data@sepa.org.uk

Revisions Policy

SEPA will provide information about any revisions made to this release and any associated datasets. Revisions could occur for various reasons, including when data from third parties are unavailable or provisional at the time of publishing or if there are subsequent methodological improvements or refinements.

The figures are accurate at the time of publication. However, the data may be updated if further revisions are necessary. Normally these revisions will be published concurrent with the next release.

Revisions to 2021 waste incinerated in Scotland data since the last statistical publication are shown in Table 5 below. The changes for Incineration by recovery and Incinerated by disposal are primarily due to re-categorisation, following the accreditation of an additional two incinerators to the R1 incineration efficiency standard. Changes in the total for 2020 are due to revised waste returns.

Table 5. Revisions to the 2011 - 2021 waste incinerated in Scotland

YEAR	INCINERATED BY RECOVERY		INCINERATED BY CO-INCINERATION		INCINERATED BY DISPOSAL		TOTAL	
	ORIGINAL	REVISED	ORIGINAL	REVISED	ORIGINAL	REVISED	ORIGINAL	REVISED

Methodology

Data is taken from licensed/permitted site returns or reports submitted to SEPA. Further details on the methodology used to produce the figures are provided in the annual Waste Data Quality Reports on [SEPA's web site](#).

Release

The release of this publication is in line with release practices specified in the [Code of Practice for Statistics](#). The statistics are released at the standard time of 9.30 am on a pre-announced weekday date. Pre-release access to the statistics in their final form is provided to Scottish ministers and those on a list of named officials advising them five working days before the public release. This is to ensure that at the time of release Scottish ministers are able to comment publicly on the statistics based on a correct understanding of them.

Glossary of terms

EWC Code – European Waste Catalogue waste code

Hazardous Waste – waste with hazardous properties which may render it harmful to human health or the environment. Hazardous waste is also called Special Waste in Scotland as defined in the [Special Waste Regulations 1996](#) [Latest Available (Revised) version]

WFAS – waste from all sources. This includes waste from commercial and industrial sources, construction and demolition sources as well as from household sources.

Waste incinerated by co-incineration – wastes used principally as a fuel and incinerated at an incineration facility in which the main purpose is the generation of energy or production of material products (e.g. cement) and which uses waste as an additional fuel.

Waste incinerated by disposal - wastes incinerated at an incineration facility where the energy efficiency has not been demonstrated to meet the R1 criteria specified in the EU Waste Framework Directive (Directive 2008/98/EC).

Waste incinerated by recovery - wastes used principally as a fuel to generate energy and incinerated at an incineration facility where the energy efficiency has been demonstrated to meet the R1 energy efficiency criteria specified in the EU Waste Framework Directive (Directive 2008/98/EC).

Waste recovered by incineration - wastes incinerated by co-incineration and waste incinerated by recovery.

Waste incinerated - WFAS that is incinerated in Scotland including waste incineration by disposal and waste incineration by recovery.
