

## Bathing Water Profile for North Berwick (West)

North Berwick, Scotland

Current water classification <https://www2.sepa.org.uk/BathingWaters/Classifications.aspx>

### Description

The North Berwick (West) bathing water is located on the northern coast of the North Berwick in East Lothian. The sandy beach is approximately 600 metres long. The area is popular with families and includes a small paddling area which retains water when the tide is out. The nearby Scottish Seabird Centre also attracts many visitors.

During high and low tides the approximate distance to the water's edge can vary from 0–130 metres.

### Site details

Local authority	East Lothian Council
Year of designation	1999
Water sampling location	NT 55164 85462

### Catchment description

The catchment draining into the North Berwick (West) bathing water extends to 1.5 km<sup>2</sup>. The area is a mixture of urban and rural land use. The main population centre within the catchment is the town of North Berwick.

There are several protected areas within or in the vicinity of the bathing water and/or bathing water catchment, including two Special Protection Areas, two Sites of Special Scientific Interest and a Ramsar site.

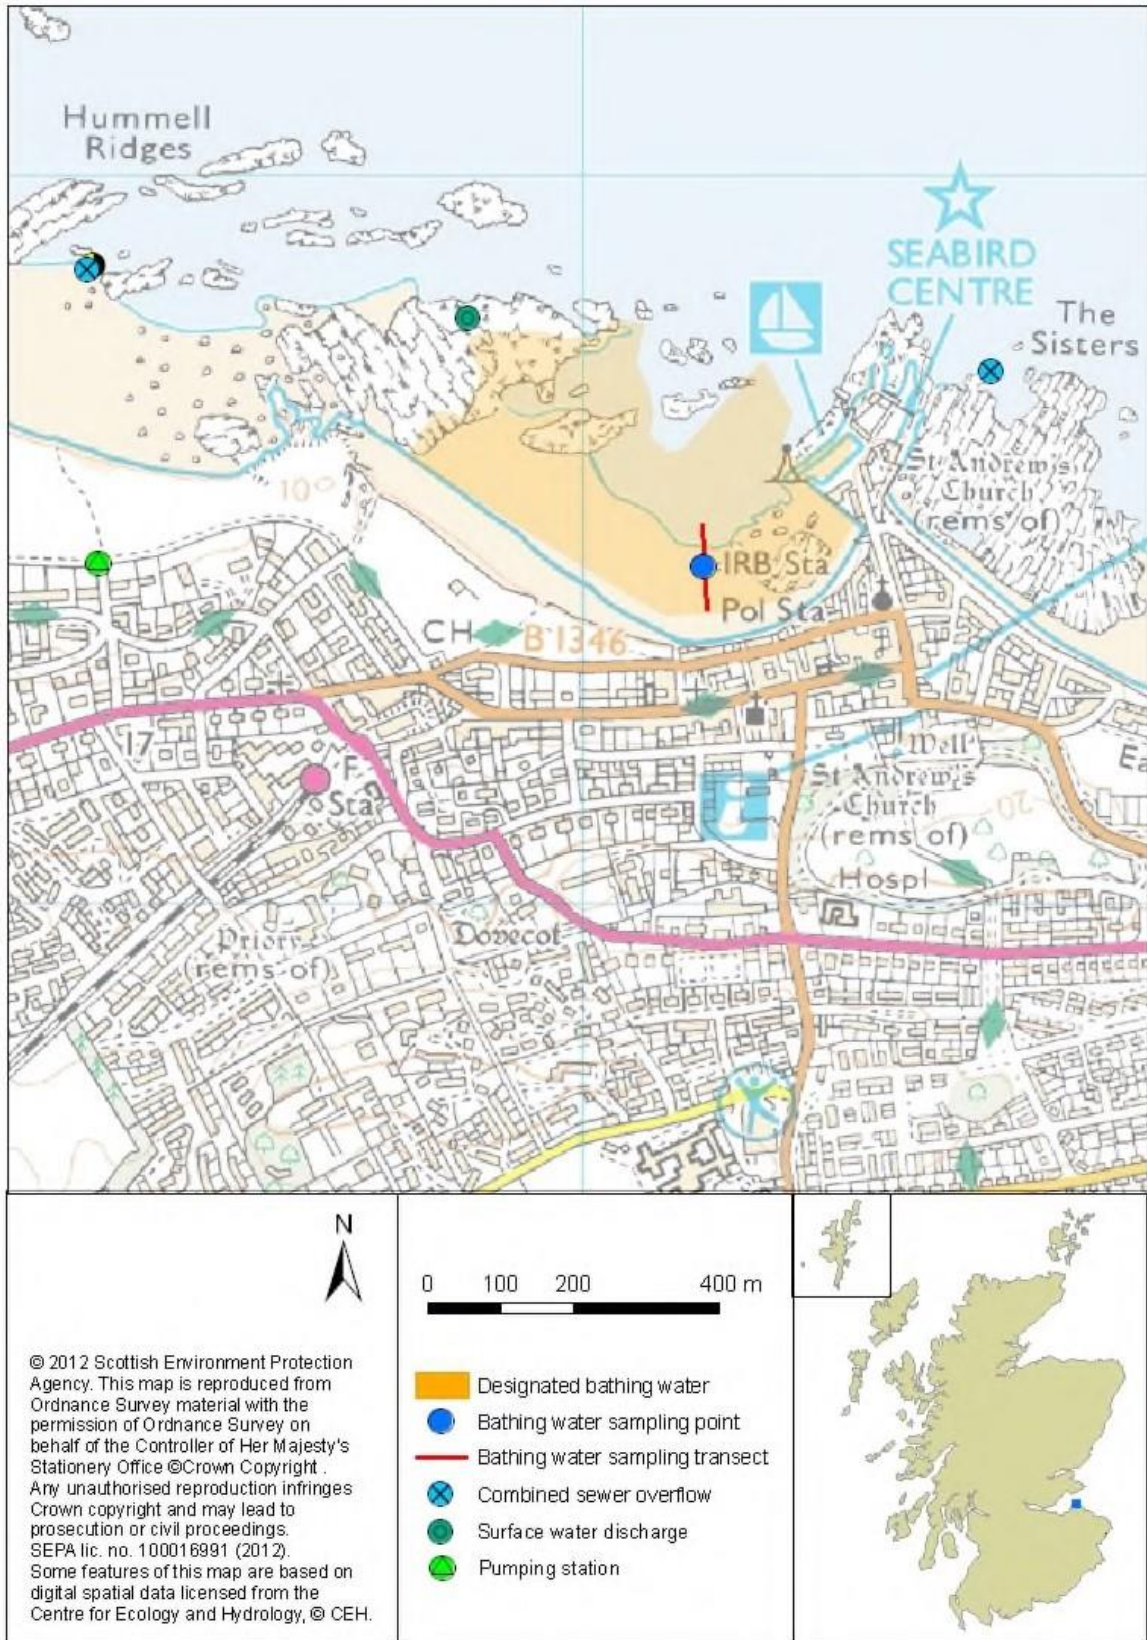

### Risks to water quality

The principal risks and source of wet weather-driven short term pollution at this bathing water arise from combined sewer overflows and treated sewage effluent.

There is a risk that water pollution may occur after heavy rainfall. **Bathing is not advised during or 1-2 days after heavy rainfall. This is due to the risk to bathers' health from water pollution.**

Our regulatory and scientific assessment indicates that potential sources of short-term faecal indicator pollution at this bathing water can originate from human sources.

## **Improving bathing water quality**

### **Improving pollution from sewage and other discharges**

Scottish Water provides most waste water collection and treatment services in Scotland.

North Berwick sewage treatment works and its long sea outfall were commissioned in 1995 and resulted in a marked improvement in bathing water quality.

### **Improving pollution from diffuse urban sources**

Urban diffuse source pollution comes from contaminated rainwater discharging to rivers and streams.

Diffuse urban pollution is considered to affect this bathing water. SEPA is investigating the surface water network for potential sources of contamination.

SEPA, local authorities and Scottish Water are working together to tackle urban diffuse pollution. Sustainable Urban Drainage Systems (SUDS) have been incorporated into local plans and partner organisations have been encouraged to retrofit SUDS where possible.

### **Cyanobacteria (blue-green algae)**

Marine waters are not at risk of cyanobacteria overproduction.

### **Algae**

Current information suggests that this bathing water is not at risk of excessive growth of macroalgae (seaweed) or phytoplankton.

### **Jellyfish**

There is a possibility of increased numbers of jellyfish in the water during summer months. This is a naturally occurring phenomenon. Most species common to the UK are harmless. The Marine Conservation Society advises to 'look but don't touch'.

### **Responding to pollution incidents**

Please use our 24 hour hotline (03000 996699) to report pollution. SEPA will investigate the incident and contact other relevant organisations. That may include Scottish Ministers, Scottish Water, the local authority and the relevant health board. Where necessary, measures will be put in place to resolve the problem.

If beach users or bathers are considered to be at risk, the local authority will warn the public by erecting signs at the bathing water. Information will also be available on our website.

SEPA will investigate whenever our sampling identifies pollution.

Beach users are encouraged to use the bins provided or to take litter home. Beach cleaning and litter clean-up is maintained by East Lothian Council for this bathing water.
