Licence condition – 4.2.2

NGR: NN 0453 2868

LOCATION: Loch Awe Barrage

TOTAL AVAILABLE VOLUME: 15,200,000m³ (in addition to compensation flows)

FRESHET SEASON: 23 April – 23 December

FREQUENCY: The following freshet regime shall be delivered subject to the baseline compensation flow being amended in the Awe CAR licence and the annual compensation and freshet totals not being exceeded:

One freshet to be delivered on Saturday 23 April 2022. The freshet on this day shall deliver a volume of 300,000 m³ over a period of 12 hours, i.e. the total flow including the compensation flow shall be increased to the equivalent of 1,200,000 m³/day, starting at 08:00 and finishing at 20:00.

Two freshets to be delivered on Saturday 7 and Sunday 8 May 2022. The freshet on these days shall deliver a volume of 300,000 m³ over a period of 12 hours, i.e. the total flow including the compensation flow shall be increased to the equivalent of 1,200,000 m³/day, starting at 06:00 and finishing at 18:00 on each day.

One freshet starting at 08:00 on the last Sunday in July and August, each of these freshets shall deliver a volume of 500,000 m³ over one day (24 hours) i.e. the total flow including the compensation shall be increased to 1,500,000 m³/day.

One freshet starting at 08:00 on the last Sunday in September. This freshet shall deliver a volume of 600,000 m³ over one day (24 hours) i.e. the total flow including the compensation shall be increased to 1,500,000 m³/day.

A total of six freshets, the first freshet commencing at 12:00 on the second Friday in October and commencing at 12:00 every second Friday thereafter. Where the sixth freshet would fall outside the freshet season above, it may be delivered earlier. Each freshet shall deliver a volume of 2,100,000 m³ over three days (72 hours) i.e. the total flow including the compensation shall be increased to 1,500,000 m³/day.

TOTAL ALLOCATED VOLUME: 18,000,000 m³

SCHEDULE 2

SMOLT FRESHETS

A 'smolt freshet' shall be released when the following conditions occur:

There are reliable reports of a build-up of smolts upstream of the Awe Barrage (this is likely to be by the fisheries board bailiff and/or fisheries trust biologist),
No main machine running at Inverawe because of insufficient water,
No planned machine running at Inverawe due to insufficient water / forecast rainfall, and,
SSE receive a written request from SEPA that a release be made.

Each smolt freshet shall consist of the following actions:

The flow will be maintained at the current level, i.e. either the normal compensation flow or a lower flow, based on the inflow to Loch Awe (condition 4.2.3 of the licence allows that when the inflow to Loch Awe falls below 15.785 m³/s the outflow shall be equal to the inflow). All the flow, apart from the fish pass flow, shall be passed via the freshet gate.
The freshet will start on or about 19:00 and finish on or about 07:00 the following morning.

Notwithstanding condition 4.2.3 of the licence which limits the required flow if the flows entering Loch Awe are less than 15.785 m³/s.
