[1]All the figures are calculated according to the Zero Waste Plan - guidance for local authorities Jan-Mar 2011 data which was reported prior to the Zero Waste Plan definition of household waste and recycling comming into effect has been reformulated where necessary in accordance with this guidance for the purpose of combining data from the first quarter with the latter three quarters for each local authority .

[2] Household waste is waste generated by households (see full definition in par 1.2 of the Zero Waste Plan - guidance for local authorities).

[3] Recovery includes household waste treated using energy from waste, mechanical biological and heat treatment. Recovery includes any Incinerator Bottom Ash and Metals recycled as a result of treatment, and excludes the residue from incineration which is landfilled. Recovery also excludes any weight loss during the treatment process.

[4] Includes household waste disposed of instead of being recycled and residues from incineration that are landfilled.

[5] LACMSW = Local authority collected municipal solid waste.

*****Recycling and composting rate for LACMW according to the OLD guidance. The figures have been reported for this financial year in order to add clarity, transparency and trending data during the transition to the new reporting method. They do not count towards meeting the Zero Waste Plan targets. OLD guidance is for financial year.

Please note local authorities report stockpiled materials in the quarter when the material is sent to reprocessors to avoid discrepancies with the total arisings. The figures are accurate at the time of publication. However the data may be updated if further revisions are necessary.
